EDUCATION

University of California, Santa Cruz

Sept. 2023 – Jun. 2027

B.S. Computer Science

GPA: 3.85/4.0

Relevant Coursework: Programming Abstractions: Python (CSE30) · Vector Calculus (MATH23A) · Computer Architecture (CSE120) · Computer Systems and C Programming (CSE13S) · Linear Algebra (MATH21A) · Introduction to Data Structures and Algorithms (CSE101) · Principles of Computer Systems Design (CSE130) · Database Systems 1 (CSE180)

EXPERIENCE

Full Stack Developer – Tech4Good

Aug. 2025 – Present

- Shipped reusable Timely UI: built 8 reusable Angular components from Figma specs using HTML/SCSS/TypeScript and @Input/@Output bindings to Timely (a university scheduling platform); improved usability by reducing steps, clarified labels, and consistent empty/error states.
- Components: defined elements with Angular material, custom SCSS, positioned layout with flex/grid, bound UI via Signals and event binding; cut average interactions to schedule a meeting from 4 to 2 clicks.
- Containers: authored Firestore queries + writes, NgRx SignalStore with typed actions/selectors, optimistic updates with rollback, batch writes/transactions for atomic changes; reduced duplicates reads by ~20%.
- Participated in PR-based peer code reviews, gave and incorporated actionable feedback before merge to maintain quality code.

Data Engineer Intern – SPK & Associates

Jan. 2025 – Present

- Centralized billing data: built a daily, automated ETL in Python & Apache Airflow to ingest AWS billing from S3, validate, clean, and load modeled tables into Snowflake, creating a single source for Finance & Analytics.
- Production-reliable: implemented idempotent tasks, monthly partitions, data quality checks, alerts/retries, kept daily runs on schedule (>99%) with fast recovery on failures.
- Delivered business impact: enabled Finance to generate invoices in Power BI with fast SQL instead of manual spreadsheets; Cut prep time from hours to minutes (~90% faster) and improved invoice accuracy (86% → 98%).
- Documentation: authored Confluence documentation, a project review, and a project architecture diagram so others can operate/update the pipeline.

Web3 Security Data Analyst Externship

May. 2024 – July. 2024

- Labeled and analyzed smart contract vulnerabilities and verified the accuracy of my peers' data labels, resulted in an increase in accuracy on a trained Language Learning Model.
- Conducted frequency and correlation analysis to examine smart contract vulnerabilities and their relationship using Python and Pandas library.
- Analyzed cluster samples by applying unsupervised machine learning strategies, identified over 30 patterns to detect profile risks among a large set of smart contracts.

ORGANIZATIONS

Alpha Kappa Psi

Santa Cruz, CA

Professional Co-Ed Business Fraternity

Executive Vice President

Jun. 2025 – Present

- Assist the President in guiding chapter direction and philosophy for social and professional success.
- Manage communication between executive members and committees; Support executive members in achieving goals.
- Converted the alumni job database into a structure database for long-term use.

Vice President of Philanthropy

Jun. 2024 – Jun. 2025

- Planned eight service events and ensured maximum participation to aid the Santa Cruz community.
- Established a fine policy system linked to the attendance system.

ADDITIONAL INFORMATION

Skills: Python · Java · C · Unit Testing · C++ · Bash · Snowflake · AWS · Git · ETL · Automation · Apache Airflow · Angular · SQL
